PRESS RELEASE

Ocean Medical International Limited (OMI), suppliers of Medical Kits and medical equipment to yachts, announce the release of the latest edition of their CD Rom. Forming part of the unique OMI Medical System of Care at Sea the CD Rom contains a wealth of useful information for dealing safely with medical problems at sea.

Included on the CD Rom are full instructions on the use of all medications in OMI Medical Kits from the Daytripper for coastal waters to MCA Class A level and beyond. Full inventories of all OMI Medical Kits are provided making re-ordering of used or date-expired items a simple task.

The reference section has essential information on a wide range of medical problems and provides direct links to the medication instructions. Forgotten how to draw up and give an intramuscular injection? That's not a problem as the CD Rom has videos to show you how it's done. There are also videos of how to give local anaesthetic as a sub-cutaneous injection and of how to suture.

Seafarers are professional travellers and should have effective protection through vaccination against tropical and infectious diseases. The CD Rom has vaccine tables providing a guide to the vaccination requirements for different regions and countries, and information on how to protect against malaria.

In an emergency knowing the right number to call for medical advice is vital. The OMI CD Rom has a section on how to get medical advice around the world by SAT COM, radio or telephone, plus the numbers to call for National Poisons Units and National Centres for Diving Emergencies.

The OMI CD Rom is only available to purchasers of OMI Medical Kits and complements the comprehensive written Medical Instructions Manual, Assessment Guide and Reference Manual that are included with the CD Rom in all OMI Medical Kits.

Further information about the range of Ocean Medical International Limited Medical Kits can be found on their website, www.omi2.com, or by calling (+34) 629 818 826.
