### **Monaco Yacht Show – Telemedicine & First Aid live demonstrations**

Ocean Medical International announces that they will be providing telemedicine and first aid procedure demonstrations during the Monaco Boat Show. Procedures such as resuscitation techniques, suturing, injection-giving, pulse oximetry etc. will be incorporated with live demos of the STS Lite Telemedicine monitoring unit.

The STS Lite is a new state-of-the-art electronic communications device which monitors the vital signs of a patient and transmits live to a Call Centre manned 24/7 by Doctors and surgeons. Numerous additional features such as photos & video transmission, first aid procedures and medications database are incorporated into the touch screen device. For the information [www.yachttelemedicine.com](http://www.yachttelemedicine.com)

A scenario will be demonstrated where a 'patient' is assessed remotely with a Doctor recommending treatment. A 'patient' can choose from a range of conditions, such as chest pain, breathless, collapse, fall etc while the Doctor monitors the patients vital signs transmitted from the telemedicine unit.

Located in the British Marine Federation Pavilion in the Darse Sud air conditioned tent, QS42, we are offering a significant 33% price discount for telemedicine orders during the Monaco Boat Show. This offer will be extended to the FLIBS and METS shows as well.
